

Package ‘ROpenFLUID’

August 12, 2020

Type Package

Title R Interface to OpenFLUID Platform Framework for Modelling and Simulation of Landscapes

Version 2.1.10-20200721

Date 2020-08-12

Author Jean-Christophe Fabre <jean-christophe.fabre@supagro.inra.fr>

Maintainer Jean-Christophe Fabre <jean-christophe.fabre@supagro.inra.fr>

Description Provides a collection of functions to load, parameterize, run and analyze OpenFLUID simulations within the GNU R environment.

URL <http://www.openfluid-project.org>

License GPL-3 + file LICENSE

Depends R (>= 2.6.2)

Suggests RUnit

LazyLoad yes

RoxygenNote 7.0.2

OpenFLUID.addExtraObserversPaths
Adds paths to search for observers

Description

Adds paths to search for observers

Usage

```
OpenFLUID.addExtraObserversPaths(paths)
```

Arguments

paths the colon separated paths to add

See Also

```
OpenFLUID.getObserversPaths
OpenFLUID.getExtraObserversPaths
OpenFLUID.resetExtraObserversPaths
```

Examples

```
## Not run:
OpenFLUID.addExtraObserversPaths("/first/path")
OpenFLUID.addExtraObserversPaths("/second/path:/third/path") # Unix
OpenFLUID.addExtraObserversPaths("/second/path;/third/path") # Windows
OpenFLUID.addExtraObserversPaths(c("/fourth/path","/fifth/path"))

## End(Not run)
```

OpenFLUID.addExtraSimulatorsPaths
Adds paths to search for simulators

Description

Adds paths to search for simulators

Usage

```
OpenFLUID.addExtraSimulatorsPaths(paths)
```

Arguments

paths the colon separated paths to add

See Also

OpenFLUID.getSimulatorsPaths
 OpenFLUID.getExtraSimulatorsPaths
 OpenFLUID.resetExtraSimulatorsPaths

Examples

```
## Not run:
OpenFLUID.addExtraSimulatorsPaths("/first/path")
OpenFLUID.addExtraSimulatorsPaths("/second/path:/third/path") # Unix
OpenFLUID.addExtraSimulatorsPaths("/second/path;/third/path") # Windows
OpenFLUID.addExtraSimulatorsPaths(c("/fourth/path", "/fifth/path"))

## End(Not run)
```

```
OpenFLUID.addVariablesExportAsCSV
```

Adds export of simulation variables as CSV files for a given units class

Description

Adds export of simulation variables as CSV files for a given units class

Usage

```
OpenFLUID.addVariablesExportAsCSV (
  ofblob,
  unitclass,
  unitid = NULL,
  varname = "*",
  precision = 0
)
```

Arguments

ofblob the simulation definition blob
 unitclass the units class to add for simulation variables export
 unitid the unit ID (optional)
 varname the name of the variable(s) (optional)
 precision the number of digits of the variables (optional)

See Also

OpenFLUID.loadResult

Examples

```
## Not run:
OpenFLUID.addVariablesExportAsCSV(ofsim, "TU")
OpenFLUID.addVariablesExportAsCSV(ofsim, "TU", 1, "var1", precision = 14)
OpenFLUID.addVariablesExportAsCSV(ofsim, "TU", 2, "var1;var2")
OpenFLUID.addVariablesExportAsCSV(ofsim, "TU", 2, c("var1", "var2"))
OpenFLUID.addVariablesExportAsCSV(ofsim, "TU", c(3, 5), c("var1", "var2"))
OpenFLUID.addVariablesExportAsCSV(ofsim, "TU", 1, "*")

## End (Not run)
```

OpenFLUID.createAttribute

Creates an attribute for all spatial units of a class, initialized with a default value

Description

Creates an attribute for all spatial units of a class, initialized with a default value

Usage

```
OpenFLUID.createAttribute(ofblob, unitclass, attrname, attrval)
```

Arguments

ofblob	the simulation definition blob
unitclass	the unit class
attrname	the attribute name
attrval	the default attribute value for alla units

See Also

OpenFLUID.getAttribute

OpenFLUID.setAttribute

OpenFLUID.removeAttribute

Examples

```
## Not run:
OpenFLUID.createAttribute(ofsim, "SU", "area", 1.0)
OpenFLUID.createAttribute(ofsim, "SU", "code", "NONE")

## End(Not run)
```

```
OpenFLUID.deleteSimulationBlob
Delete simulation blob
```

Description

Delete simulation blob

Usage

```
OpenFLUID.deleteSimulationBlob(ofblob)
```

Arguments

ofblob the simulation definition blob

Examples

```
## Not run:
OpenFLUID.deleteSimulationBlob(ofsim)

## End(Not run)
```

```
OpenFLUID.getAttribute
Returns an attribute value for a given spatial unit
```

Description

Returns an attribute value for a given spatial unit

Usage

```
OpenFLUID.getAttribute(ofblob, unitclass, unitid, attrname)
```

Arguments

ofblob	the simulation definition blob
unitclass	the unit class
unitid	the unit ID
attrname	the name of the attribute

Value

the attribute value

See Also

OpenFLUID.createAttribute
OpenFLUID.setAttribute
OpenFLUID.removeAttribute

Examples

```
## Not run:  
val = OpenFLUID.getAttribute(ofsim, "SU",18, "length")  
  
## End(Not run)
```

OpenFLUID.getAttributes

Returns the attributes values for given spatial units and attributes names

Description

Returns the attributes values for given spatial units and attributes names

Usage

```
OpenFLUID.getAttributes(  
  ofblob,  
  unitclass,  
  unitids,  
  attrnames,  
  unitidsAsRownames = TRUE  
)
```

Arguments

ofblob	the simulation definition blob
unitclass	the unit class
unitids	the vector of unit IDs
attrnames	the vector of names of the attributes
unitidsAsRownames	if TRUE rename row as unitids, if FALSE add a column of unitids

Value

a data.frame (unitids x attrnames) of the attribute values

See Also

OpenFLUID.setAttributes

Examples

```
## Not run:
valdf = OpenFLUID.getAttributes(ofsim, "SU", c(18, 23), c("length", "width"))

## End(Not run)
```

OpenFLUID.getAttributesNames

Returns all the attributes names of an units class

Description

Returns all the attributes names of an units class

Usage

```
OpenFLUID.getAttributesNames(ofblob, unitclass)
```

Arguments

ofblob	the simulation definition blob
unitclass	the class unit

Value

a vector of attributes names

See Also

```
OpenFLUID.getModelGlobalParamNames  
OpenFLUID.getGeneratorParamNames  
OpenFLUID.getSimulatorParamNames  
OpenFLUID.getObserverParamNames
```

Examples

```
## Not run:  
varnames = OpenFLUID.getAttributesNames(ofsim, unitclass)  
  
## End(Not run)
```

```
OpenFLUID.getDefaultDeltaT
```

Returns the default time step of the simulation

Description

Returns the default time step of the simulation

Usage

```
OpenFLUID.getDefaultDeltaT(ofblob)
```

Arguments

ofblob the simulation definition blob

Value

the time step value in seconds

See Also

```
OpenFLUID.setDefaultDeltaT
```

Examples

```
## Not run:  
deltat = OpenFLUID.getDefaultDeltaT(ofsim)  
  
## End(Not run)
```

```
OpenFLUID.getExtraObserversPaths
```

Returns the added paths to search for observers

Description

Returns the added paths to search for observers

Usage

```
OpenFLUID.getExtraObserversPaths()
```

Value

a vector of paths

See Also

```
OpenFLUID.addExtraObserversPaths
```

```
OpenFLUID.getObserversPaths
```

```
OpenFLUID.resetExtraObserversPaths
```

Examples

```
## Not run:  
paths = OpenFLUID.getExtraObserversPaths()  
  
## End(Not run)
```

```
OpenFLUID.getExtraSimulatorsPaths
```

Returns the added paths to search for simulators

Description

Returns the added paths to search for simulators

Usage

```
OpenFLUID.getExtraSimulatorsPaths()
```

Value

a vector of paths

See Also

```
OpenFLUID.addExtraSimulatorsPaths
OpenFLUID.getSimulatorsPaths
OpenFLUID.resetExtraSimulatorsPaths
```

Examples

```
## Not run:
paths = OpenFLUID.getExtraSimulatorsPaths()

## End(Not run)
```

```
OpenFLUID.getGeneratorParam
```

Returns a the value of a generator parameter

Description

Returns a the value of a generator parameter

Usage

```
OpenFLUID.getGeneratorParam(ofblob, unitclass, varname, paramname)
```

Arguments

ofblob	the simulation definition blob
unitclass	the unit class to which the generator is applied
varname	the variable name to which the generator is applied
paramname	the name of the parameter

Value

the parameter value

See Also

```
OpenFLUID.setGeneratorParam
```

Examples

```
## Not run:
val = OpenFLUID.getGeneratorParam(ofsim, "SU", "var.flux", "fixedvalue")

## End(Not run)
```

OpenFLUID.getGeneratorParamNames

Returns all parameters names of a generator

Description

Returns all parameters names of a generator

Usage

```
OpenFLUID.getGeneratorParamNames(ofblob, unitclass, varname)
```

Arguments

ofblob	the simulation definition blob
unitclass	the name of the variable generated
varname	the name of the variable generated

Value

a vector of parameters names

See Also

OpenFLUID.getModelGlobalParamNames

OpenFLUID.getSimulatorParamNames

OpenFLUID.getObserverParamNames

Examples

```
## Not run:  
varnames = OpenFLUID.getGeneratorParamNames(ofsim, "SU", "var1")  
  
## End(Not run)
```

OpenFLUID.getGeneratorParams

Returns the values of generator parameters

Description

Returns the values of generator parameters

Usage

```
OpenFLUID.getGeneratorParams(ofblob, unitclass, varname, paramnames)
```

Arguments

ofblob	the simulation definition blob
unitclass	the unit class to which the generator is applied
varname	the variable name to which the generator is applied
paramnames	the names of the parameters

Value

the parameter values

See Also

OpenFLUID.getModelGlobalParams

OpenFLUID.getObserverParams

OpenFLUID.getSimulatorParams

Examples

```
## Not run:  
val = OpenFLUID.getGeneratorParams(ofsim, "SU", "var.flux", c("min", "max"))  
  
## End(Not run)
```

```
OpenFLUID.getGeneratorsVarNames
```

Returns all the variables names generated by generators

Description

Returns all the variables names generated by generators

Usage

```
OpenFLUID.getGeneratorsVarNames (ofblob, unitclass)
```

Arguments

ofblob	the simulation definition blob
unitclass	the units class

Value

a vector of variables names

See Also

```
OpenFLUID.getSimulatorsIDs
```

```
OpenFLUID.getObserversIDs
```

Examples

```
## Not run:  
varnames = OpenFLUID.getGeneratorsVarNames (ofsim, "SU")  
  
## End (Not run)
```

```
OpenFLUID.getModelGlobalParam
```

Returns the value of a global parameter of the model

Description

Returns the value of a global parameter of the model

Usage

```
OpenFLUID.getModelGlobalParam (ofblob, paramname)
```

Arguments

ofblob the simulation definition blob
paramname the name of the parameter

Value

the parameter value

See Also

OpenFLUID.setModelGlobalParam
OpenFLUID.removeModelGlobalParam

Examples

```
## Not run:  
val = OpenFLUID.getModelGlobalParam(ofsim, "gvalue")  
  
## End(Not run)
```

OpenFLUID.getModelGlobalParamNames

Returns all the global parameters names

Description

Returns all the global parameters names

Usage

```
OpenFLUID.getModelGlobalParamNames(ofblob)
```

Arguments

ofblob the simulation definition blob

Value

a vector of parameters names

See Also

OpenFLUID.getGeneratorParamNames
OpenFLUID.getSimulatorParamNames
OpenFLUID.getObserverParamNames

Examples

```
## Not run:
varnames = OpenFLUID.getModelGlobalParamNames(ofsim)

## End(Not run)
```

OpenFLUID.getModelGlobalParams

Returns the values of global parameters of the model

Description

Returns the values of global parameters of the model

Usage

```
OpenFLUID.getModelGlobalParams(ofblob, paramnames)
```

Arguments

ofblob	the simulation definition blob
paramnames	names of the parameters

Value

the parameter values

See Also

```
OpenFLUID.getGeneratorParams
OpenFLUID.getObserverParams
OpenFLUID.getSimulatorParams
```

Examples

```
## Not run:
vals = OpenFLUID.getModelGlobalParams(ofsim, c("gvalueA", "gvalueB"))

## End(Not run)
```

```
OpenFLUID.getObserverParam
```

Returns the value of an observer parameter

Description

Returns the value of an observer parameter

Usage

```
OpenFLUID.getObserverParam(ofblob, obsid, paramname)
```

Arguments

ofblob	the simulation definition blob
obsid	the observer ID
paramname	the name of the parameter

Value

the parameter value

See Also

```
OpenFLUID.setObserverParam  
OpenFLUID.removeObserverParam
```

Examples

```
## Not run:  
val = OpenFLUID.getObserverParam(ofsim, "my.observer", "value")  
  
## End(Not run)
```

```
OpenFLUID.getObserverParamNames
```

Returns all parameters names of an observer

Description

Returns all parameters names of an observer

Usage

```
OpenFLUID.getObserverParamNames(ofblob, obsid)
```

Arguments

ofblob	the simulation definition blob
obsid	the observer ID

Value

a vector of parameters names

See Also

OpenFLUID.getModelGlobalParamNames
OpenFLUID.getGeneratorParamNames
OpenFLUID.getSimulatorParamNames

Examples

```
## Not run:  
varnames = OpenFLUID.getObserverParamNames(ofsim, obsid)  
  
## End(Not run)
```

OpenFLUID.getObserverParams

Returns the values of observer parameters

Description

Returns the values of observer parameters

Usage

```
OpenFLUID.getObserverParams(ofblob, obsid, paramnames)
```

Arguments

ofblob	the simulation definition blob
obsid	the observer ID
paramnames	names of the parameters

Value

the parameter values

See Also

```
OpenFLUID.getModelGlobalParams
OpenFLUID.getGeneratorParams
OpenFLUID.getSimulatorParams
```

Examples

```
## Not run:
vals = OpenFLUID.getObserverParams(ofsim, "my.observer", c("valueA", "valueB"))

## End(Not run)
```

```
OpenFLUID.getObserversIDs
```

Returns all observers IDs used for the monitoring

Description

Returns all observers IDs used for the monitoring

Usage

```
OpenFLUID.getObserversIDs(ofblob)
```

Arguments

```
ofblob          the simulation definition blob
```

Value

a vector of observers IDs

See Also

```
OpenFLUID.getGeneratorsVarNames
OpenFLUID.getSimulatorsIDs
```

Examples

```
## Not run:
varnames = OpenFLUID.getObserversIDs(ofsim)

## End(Not run)
```

```
OpenFLUID.getObserversPaths
```

Returns all the paths to search for observers

Description

Returns all the paths to search for observers

Usage

```
OpenFLUID.getObserversPaths ()
```

Value

a vector of paths

See Also

```
OpenFLUID.addExtraObserversPaths
```

```
OpenFLUID.getExtraObserversPaths
```

```
OpenFLUID.resetExtraObserversPaths
```

Examples

```
## Not run:  
paths = OpenFLUID.getObserversPaths ()  
  
## End (Not run)
```

```
OpenFLUID.getPeriodBeginDate
```

Returns the begin date of the simulation period

Description

Returns the begin date of the simulation period

Usage

```
OpenFLUID.getPeriodBeginDate (ofblob)
```

Arguments

ofblob the simulation definition blob

Value

the begin date as an ISO datetime string (%Y-%m-%d %H:%M:%S)

See Also

OpenFLUID.setPeriodBeginDate

OpenFLUID.getPeriodEndDate

OpenFLUID.setPeriodEndDate

Examples

```
## Not run:  
bdate = OpenFLUID.getPeriodBeginDate(ofsim)  
  
## End (Not run)
```

OpenFLUID.getPeriodEndDate

Returns the end date of the simulation period

Description

Returns the end date of the simulation period

Usage

```
OpenFLUID.getPeriodEndDate(ofblob)
```

Arguments

ofblob the simulation definition blob

Value

the end date as an ISO datetime string (%Y-%m-%d %H:%M:%S)

See Also

OpenFLUID.setPeriodEndDate

OpenFLUID.getPeriodBeginDate

OpenFLUID.setPeriodBeginDate

Examples

```
## Not run:  
edate = OpenFLUID.getPeriodEndDate(ofsim)  
  
## End(Not run)
```

```
OpenFLUID.getSimulatorParam
```

Returns the value of a simulator parameter

Description

Returns the value of a simulator parameter

Usage

```
OpenFLUID.getSimulatorParam(ofblob, simid, paramname)
```

Arguments

ofblob	the simulation definition blob
simid	the simulator ID
paramname	the name of the parameter

Value

the parameter value

See Also

```
OpenFLUID.setSimulatorParam  
OpenFLUID.removeSimulatorParam
```

Examples

```
## Not run:  
val = OpenFLUID.getSimulatorParam(ofsim, "my.simulator", "coeff")  
  
## End(Not run)
```

```
OpenFLUID.getSimulatorParamNames
```

Returns all the parameters names of a simulator

Description

Returns all the parameters names of a simulator

Usage

```
OpenFLUID.getSimulatorParamNames(ofblob, simid)
```

Arguments

ofblob	the simulation definition blob
simid	the simulator ID

Value

a vector of parameters names

See Also

OpenFLUID.getModelGlobalParamNames

OpenFLUID.getGeneratorParamNames

OpenFLUID.getObserverParamNames

Examples

```
## Not run:  
varnames = OpenFLUID.getSimulatorParamNames(ofsim, simid)  
  
## End(Not run)
```

```
OpenFLUID.getSimulatorParams
```

Returns the values of simulator parameters

Description

Returns the values of simulator parameters

Usage

```
OpenFLUID.getSimulatorParams(ofblob, simid, paramnames)
```

Arguments

ofblob	the simulation definition blob
simid	the simulator ID
paramnames	names of the parameters

Value

the parameter values

See Also

OpenFLUID.getObserverParams
 OpenFLUID.getSimulatorParams

Examples

```
## Not run:
vals = OpenFLUID.getSimulatorParams(ofsim, "my.simulator",c("coeff","coeff"))

## End(Not run)
```

OpenFLUID.getSimulatorsIDs

Returns all the simulators IDs used by the model

Description

Returns all the simulators IDs used by the model

Usage

```
OpenFLUID.getSimulatorsIDs(ofblob)
```

Arguments

ofblob	the simulation definition blob
--------	--------------------------------

Value

a vector of simulators IDs

See Also

OpenFLUID.getGeneratorsVarNames
 OpenFLUID.getObserversIDs

Examples

```
## Not run:  
varnames = OpenFLUID.getSimulatorsIDs (ofsim)  
  
## End(Not run)
```

OpenFLUID.getSimulatorsPaths

Returns all the paths to search for simulators

Description

Returns all the paths to search for simulators

Usage

```
OpenFLUID.getSimulatorsPaths ()
```

Value

a vector of paths

See Also

```
OpenFLUID.addExtraSimulatorsPaths  
OpenFLUID.getExtraSimulatorsPaths  
OpenFLUID.resetExtraSimulatorsPaths
```

Examples

```
## Not run:  
paths = OpenFLUID.getSimulatorsPaths ()  
  
## End(Not run)
```

```
OpenFLUID.getUnitsClasses
```

Returns the existing units classes

Description

Returns the existing units classes

Usage

```
OpenFLUID.getUnitsClasses (ofblob)
```

Arguments

ofblob the simulation definition blob

Value

a vector of units classes

See Also

```
OpenFLUID.getUnitsIDs
```

Examples

```
## Not run:  
cls = OpenFLUID.getUnitsClasses(ofsim)  
  
## End(Not run)
```

```
OpenFLUID.getUnitsIDs
```

Returns the existing units IDs for a given units class

Description

Returns the existing units IDs for a given units class

Usage

```
OpenFLUID.getUnitsIDs (ofblob, unitclass)
```

Arguments

ofblob the simulation definition blob
unitclass the units class

Value

a vector of units IDs

See Also

OpenFLUID.getUnitsClasses

Examples

```
## Not run:  
ids = OpenFLUID.getUnitsIDs(ofsim, "SU")  
  
## End(Not run)
```

OpenFLUID.getVersion

Returns the OpenFLUID version

Description

Returns the OpenFLUID version

Usage

```
OpenFLUID.getVersion()
```

Value

the OpenFLUID version number

Examples

```
## Not run:  
v = OpenFLUID.getVersion()  
  
## End(Not run)
```

OpenFLUID.loadResult

Loads results as a dataframe, giving dataset informations

Description

Loads results as a dataframe, giving dataset informations

Usage

```
OpenFLUID.loadResult(ofblob, unitclass, unitid, varname)
```

Arguments

ofblob	the simulation definition blob
unitclass	the unit class
unitid	the unit ID
varname	the variable name

Value

a dataframe containing the simulation results

See Also

OpenFLUID.loadResultFile

Examples

```
## Not run:  
resSU18 = OpenFLUID.loadResult(ofsim, "SU",18, "runoff")  
resRS1 = OpenFLUID.loadResult(ofsim, "RS",1, "waterlevel")  
  
## End(Not run)
```

```
OpenFLUID.loadResultFile
```

Loads results as a dataframe, giving output file name

Description

Loads results as a dataframe, giving output file name

Usage

```
OpenFLUID.loadResultFile(filepath)
```

Arguments

filepath the full path of file to load

Value

a dataframe containing the simulation results

See Also

```
OpenFLUID.loadResult
```

Examples

```
## Not run:  
resSU18 = OpenFLUID.loadResultFile("/path/to/output/SU18_full.out")  
resRS1 = OpenFLUID.loadResultFile("/path/to/output/RS1_waterlevel.out")  
  
## End(Not run)
```

```
OpenFLUID.openDataset
```

Opens a dataset and returns a simulation definition blob

Description

Opens a dataset and returns a simulation definition blob

Usage

```
OpenFLUID.openDataset(path)
```

Arguments

path the full path of the dataset to open

Value

a simulation definition blob

See Also

OpenFLUID.openProject
OpenFLUID.runSimulation

Examples

```
## Not run:  
ofsim = OpenFLUID.openDataset("/path/to/dataset")  
  
## End(Not run)
```

```
OpenFLUID.openProject
```

Opens a project and returns a simulation definition blob

Description

Opens a project and returns a simulation definition blob

Usage

```
OpenFLUID.openProject(path)
```

Arguments

path the full project to open

Value

a simulation definition blob

See Also

OpenFLUID.openDataset
OpenFLUID.runProject

Examples

```
## Not run:  
ofsim = OpenFLUID.openProject("/path/to/project")  
  
## End(Not run)
```

```
OpenFLUID.printSimulationInfo
```

Prints informations to screen about the simulation definition blob

Description

Prints informations to screen about the simulation definition blob

Usage

```
OpenFLUID.printSimulationInfo(ofblob)
```

Arguments

ofblob the simulation definition blob

Examples

```
## Not run:  
OpenFLUID.printSimulationInfo(ofsim)  
  
## End(Not run)
```

```
OpenFLUID.removeAttribute
```

Removes an attribute for a given spatial units class

Description

Removes an attribute for a given spatial units class

Usage

```
OpenFLUID.removeAttribute(ofblob, unitclass, attrname)
```

Arguments

ofblob the simulation definition blob
unitclass the unit class
attrname the name of the attribute

See Also

```
OpenFLUID.createAttribute  
OpenFLUID.getAttribute  
OpenFLUID.setAttribute
```

Examples

```
## Not run:  
OpenFLUID.removeAttribute(ofsim, "SU", "length")  
  
## End(Not run)
```

```
OpenFLUID.removeModelGlobalParam  
Removes a global parameter of the model
```

Description

Removes a global parameter of the model

Usage

```
OpenFLUID.removeModelGlobalParam(ofblob, paramname)
```

Arguments

ofblob	the simulation definition blob
paramname	the name of the parameter

See Also

```
OpenFLUID.getModelGlobalParam  
OpenFLUID.setModelGlobalParam
```

Examples

```
## Not run:  
OpenFLUID.removeModelGlobalParam(ofsim, "gvalue")  
  
## End(Not run)
```

```
OpenFLUID.removeObserverParam
```

Removes an observer parameter

Description

Removes an observer parameter

Usage

```
OpenFLUID.removeObserverParam(ofblob, obsid, paramname)
```

Arguments

ofblob	the simulation definition blob
obsid	the simulation observer id
paramname	the name of the parameter

See Also

```
OpenFLUID.getObserverParam  
OpenFLUID.setObserverParam
```

Examples

```
## Not run:  
OpenFLUID.removeObserverParam(ofsim, "my.observer", "value")  
  
## End(Not run)
```

```
OpenFLUID.removeSimulatorParam
```

Removes a simulator parameter

Description

Removes a simulator parameter

Usage

```
OpenFLUID.removeSimulatorParam(ofblob, simid, paramname)
```

Arguments

ofblob	the simulation definition blob
simid	the simulation simulator id
paramname	the name of the parameter

See Also

OpenFLUID.getSimulatorParam
OpenFLUID.setSimulatorParam

Examples

```
## Not run:  
OpenFLUID.removeSimulatorParam(ofsim, "my.simulator", "coeff")  
  
## End (Not run)
```

OpenFLUID.resetExtraObserversPaths

Resets list of added paths to search for observers

Description

Resets list of added paths to search for observers

Usage

```
OpenFLUID.resetExtraObserversPaths ()
```

See Also

OpenFLUID.addExtraObserversPaths
OpenFLUID.getObserversPaths
OpenFLUID.getExtraObserversPaths

Examples

```
## Not run:  
OpenFLUID.resetExtraObserversPaths ()  
  
## End (Not run)
```

```
OpenFLUID.resetExtraSimulatorsPaths
```

Resets list of added paths to search for simulators

Description

Resets list of added paths to search for simulators

Usage

```
OpenFLUID.resetExtraSimulatorsPaths()
```

See Also

```
OpenFLUID.addExtraSimulatorsPaths
```

```
OpenFLUID.getSimulatorsPaths
```

```
OpenFLUID.getExtraSimulatorsPaths
```

Examples

```
## Not run:  
OpenFLUID.resetExtraSimulatorsPaths()  
  
## End (Not run)
```

```
OpenFLUID.runProject
```

Runs a project and returns a simulation definition blob

Description

Runs a project and returns a simulation definition blob

Usage

```
OpenFLUID.runProject(path, verbose = FALSE)
```

Arguments

path	the full path of the dataset to open
verbose	enable/disable verbose mode

See Also

OpenFLUID.runSimulation
OpenFLUID.openProject

Examples

```
## Not run:  
ofsim = OpenFLUID.runProject("/path/to/dataset")  
ofsim = OpenFLUID.runProject("/path/to/dataset", verbose = TRUE)  
  
## End(Not run)
```

OpenFLUID.runSimulation

Runs a simulation from a simulation definition blob

Description

Runs a simulation from a simulation definition blob

Usage

```
OpenFLUID.runSimulation(ofblob, verbose = FALSE)
```

Arguments

ofblob	the simulation definition blob
verbose	enable/disable verbose mode

See Also

OpenFLUID.runProject
OpenFLUID.openProject
OpenFLUID.openDataset

Examples

```
## Not run:  
OpenFLUID.runSimulation(ofsim)  
OpenFLUID.runSimulation(ofsim, verbose = TRUE)  
  
## End(Not run)
```

```
OpenFLUID.runSimulationAsExternalProcess
```

Runs a simulation from a simulation definition blob as an external independent process

Description

Runs a simulation from a simulation definition blob as an external independent process

Usage

```
OpenFLUID.runSimulationAsExternalProcess (  
  ofblob,  
  workpath = NULL,  
  verbose = FALSE  
)
```

Arguments

ofblob	the simulation definition blob
workpath	a workspace for simulation files. Inside this path, an IN directory will be created to store the input dataset, and an out directory will be created for output data. If this workpath is not provided or is NULL, a temporary path will be automatically generated
verbose	the verbose mode for the run. Possible values are similar than the R system2 built-in function, e.g. FALSE for quiet mode, "" for console output, a path string for file log.

See Also

OpenFLUID.runSimulation

Examples

```
## Not run:  
OpenFLUID.runSimulationAsExternalProcess(ofsim)  
OpenFLUID.runSimulationAsExternalProcess(ofsim, workpath = "/path/to/work")  
  
## End(Not run)
```

OpenFLUID.setAttribute

Sets an attribute value for a given spatial unit

Description

Sets an attribute value for a given spatial unit

Usage

```
OpenFLUID.setAttribute(ofblob, unitclass, unitid, attrname, attrval)
```

Arguments

ofblob	the simulation definition blob
unitclass	the unit class
unitid	the unit ID
attrname	the name of the attribute
attrval	the value of the attribute

See Also

OpenFLUID.createAttribute

OpenFLUID.getAttribute

OpenFLUID.removeAttribute

Examples

```
## Not run:  
OpenFLUID.setAttribute(ofsim, "SU", 18, "length", 12.3)  
OpenFLUID.setAttribute(ofsim, "SU", 18, "CODE", "ABC")  
  
## End(Not run)
```

```
OpenFLUID.setAttributes
```

Sets attributes values for given spatial units and attributes names

Description

Sets attributes values for given spatial units and attributes names

Usage

```
OpenFLUID.setAttributes(ofblob, unitclass, attrvals)
```

Arguments

ofblob	the simulation definition blob
unitclass	the unit class
attrvals	the data.frame of values (unit id x attribute name)

See Also

```
OpenFLUID.getAttributes
```

Examples

```
## Not run:
OpenFLUID.setAttributes(
  ofsim,
  "SU",
  data.frame(
    "length"=c(1, 2),
    "width"=c(3.2, 7.8),
    "unitid"=c("SU#18", "SU#23")
  )
)

## End(Not run)
```

```
OpenFLUID.setCurrentOutputDir
```

Sets the current output directory for simulations

Description

Sets the current output directory for simulations

Usage

```
OpenFLUID.setCurrentOutputDir (path)
```

Arguments

path the output directory path

Examples

```
## Not run:  
OpenFLUID.setCurrentOutputDir("/path/to/output")  
  
## End(Not run)
```

```
OpenFLUID.setDefaultDeltaT  
                          Sets the default time step for the simulation
```

Description

Sets the default time step for the simulation

Usage

```
OpenFLUID.setDefaultDeltaT(ofblob, deltat)
```

Arguments

ofblob the simulation definition blob
deltat the time step value in seconds

See Also

```
OpenFLUID.getDefaultDeltaT
```

Examples

```
## Not run:  
OpenFLUID.setDefaultDeltaT(60)  
OpenFLUID.setDefaultDeltaT(86400)  
  
## End(Not run)
```

OpenFLUID.setGeneratorParam
Sets a value for a generator parameter

Description

Sets a value for a generator parameter

Usage

```
OpenFLUID.setGeneratorParam(ofblob, unitclass, varname, paramname, paramval)
```

Arguments

ofblob	the simulation definition blob
unitclass	the unit class to which the generator is applied
varname	the variable name to which the generator is applied
paramname	the name of the parameter
paramval	the value of the parameter

See Also

OpenFLUID.getGeneratorParam

Examples

```
## Not run:  
OpenFLUID.setGeneratorParam(ofsim, "SU", "var.flux", "fixedvalue", 12.3)  
  
## End (Not run)
```

OpenFLUID.setGeneratorParams
Sets values of generator parameters

Description

Sets values of generator parameters

Usage

```
OpenFLUID.setGeneratorParams(ofblob, unitclass, varname, paramvals)
```

Arguments

ofblob	the simulation definition blob
unitclass	the unit class to which the generator is applied
varname	the variable name to which the generator is applied
paramvals	the value of the parameters in a data.frame, with parameters names as columns names

See Also

OpenFLUID.setModelGlobalParams
 OpenFLUID.setObserverParams
 OpenFLUID.setSimulatorParams

Examples

```
## Not run:
OpenFLUID.setGeneratorParams (
  ofsim,
  "SU", "var.flux",
  data.frame("min"=0.0, "max"=1.0)
)

## End(Not run)
```

```
OpenFLUID.setModelGlobalParam
Sets a model global parameter value
```

Description

Sets a model global parameter value

Usage

```
OpenFLUID.setModelGlobalParam(ofblob, paramname, paramval)
```

Arguments

ofblob	the simulation definition blob
paramname	the name of the parameter
paramval	the value of the parameter

See Also

OpenFLUID.getModelGlobalParam
 OpenFLUID.removeModelGlobalParam

Examples

```
## Not run:
OpenFLUID.setModelGlobalParam(ofsim, "gvalue", 37.2)

## End(Not run)
```

```
OpenFLUID.setModelGlobalParams
```

Sets a value of a global parameter of the model

Description

Sets a value of a global parameter of the model

Usage

```
OpenFLUID.setModelGlobalParams(ofblob, paramvals)
```

Arguments

ofblob	the simulation definition blob
paramvals	the values of the parameters in a data.frame, with parameters names as columns names

See Also

OpenFLUID.setModelGlobalParams

OpenFLUID.setSimulatorParams

OpenFLUID.setObserverParams

Examples

```
## Not run:
OpenFLUID.setModelGlobalParams(
  ofsim,
  data.frame("gvalue1"=37.2, "gvalue2"=14.6)
)

## End(Not run)
```

```
OpenFLUID.setObserverParam
```

Sets a value for an observer parameter

Description

Sets a value for an observer parameter

Usage

```
OpenFLUID.setObserverParam(ofblob, obsid, paramname, paramval)
```

Arguments

ofblob	the simulation definition blob
obsid	the simulation observer id
paramname	the name of the parameter
paramval	the parameter value

See Also

```
OpenFLUID.getObserverParam
OpenFLUID.removeObserverParam
```

Examples

```
## Not run:
OpenFLUID.setObserverParam(ofsim, "my.observer", "value", 3)

## End(Not run)
```

```
OpenFLUID.setObserverParams
```

Sets values for observer parameters

Description

Sets values for observer parameters

Usage

```
OpenFLUID.setObserverParams(ofblob, obsid, paramvals)
```

Arguments

ofblob	the simulation definition blob
obsid	the simulation observer id
paramvals	the values of the parameters in a data.frame, with parameters names as column names

See Also

OpenFLUID.setModelGlobalParams
OpenFLUID.setGeneratorParams
OpenFLUID.setSimulatorParams

Examples

```
## Not run:  
OpenFLUID.setObserverParams (  
  ofsim,  
  "my.observer", data.frame("valueA"=3, "valueB"=6.7) )  
  
## End (Not run)
```

```
OpenFLUID.setPeriodBeginDate
```

Sets the begin date of the simulation period

Description

Sets the begin date of the simulation period

Usage

```
OpenFLUID.setPeriodBeginDate(ofblob, begindate)
```

Arguments

ofblob	the simulation definition blob
begindate	the begin date as an ISO datetime string (%Y-%m-%d %H:%M:%S)

See Also

OpenFLUID.getPeriodBeginDate
OpenFLUID.setPeriodEndDate
OpenFLUID.getPeriodEndDate

Examples

```
## Not run:
OpenFLUID.setPeriodBeginDate(ofsim, "1997-06-05 04:00:00")

## End(Not run)
```

OpenFLUID.setPeriodEndDate
Sets the end date of the simulation period

Description

Sets the end date of the simulation period

Usage

```
OpenFLUID.setPeriodEndDate(ofblob, enddate)
```

Arguments

ofblob	the simulation definition blob
enddate	the end date as an ISO datetime string (%Y-%m-%d %H:%M:%S)

See Also

```
OpenFLUID.getPeriodEndDate
OpenFLUID.setPeriodBeginDate
OpenFLUID.getPeriodBeginDate
```

Examples

```
## Not run:
OpenFLUID.setPeriodEndDate(ofsim, "1997-06-05 16:07:17")

## End(Not run)
```

```
OpenFLUID.setSimulatorParam
```

Sets a value of a simulator parameter

Description

Sets a value of a simulator parameter

Usage

```
OpenFLUID.setSimulatorParam(ofblob, simid, paramname, paramval)
```

Arguments

ofblob	the simulation definition blob
simid	the simulation simulator id
paramname	the name of the parameter
paramval	the parameter value

See Also

```
OpenFLUID.getSimulatorParam  
OpenFLUID.removeSimulatorParam
```

Examples

```
## Not run:  
OpenFLUID.setSimulatorParam(ofsim, "my.simulator", "coeff", 3)  
  
## End (Not run)
```

```
OpenFLUID.setSimulatorParams
```

Sets values of a simulator parameters

Description

Sets values of a simulator parameters

Usage

```
OpenFLUID.setSimulatorParams(ofblob, simid, paramvals)
```

Arguments

ofblob	the simulation definition blob
simid	the simulation simulator id
paramvals	the values of the parameters in a data.frame, with parameters names as columns names

See Also

OpenFLUID.setModelGlobalParams
OpenFLUID.setGeneratorParams
OpenFLUID.setObserverParams

Examples

```
## Not run:  
OpenFLUID.setSimulatorParams (  
  ofsim,  
  "my.simulator", data.frame ("coeffA"=3, "coeffB"=3.3)  
)  
  
## End (Not run)
```

OpenFLUID.writeDataset

Writes a dataset on disk from a simulation definition blob

Description

Writes a dataset on disk from a simulation definition blob

Usage

```
OpenFLUID.writeDataset (ofblob, path)
```

Arguments

ofblob	the simulation definition blob
path	the full path where the dataset is written

See Also

OpenFLUID.openDataset

Examples

```
## Not run:
OpenFLUID.writeDataset(ofsim , "/path/to/dataset")

## End (Not run)
```

ROpenFLUID

R Interface to OpenFLUID Platform Framework for Modelling and Simulation of Landscapes

Description

Provides a collection of functions to load, parameterize, run and analyze OpenFLUID simulations within the GNU R environment.

Details

Package:	ROpenFLUID
Type:	Package
Version:	
Date:	
License:	GPLv3
LazyLoad:	yes

Author(s)

Jean-Christophe Fabre <fabrejc@supagro.inra.fr>

Examples

```
## Not run:
# load OpenFLUID library
library("ROpenFLUID")

# add optional paths to search for simulators
OpenFLUID.addExtraSimulatorsPaths("/path/to/simulators")

# open an input dataset
ofsim = OpenFLUID.openDataset("/path/to/dataset")

# set the output dir
OpenFLUID.setCurrentOutputDir("/path/to/output")
```

```
# run the simulation
OpenFLUID.runSimulation(ofsim)

## End (Not run)
```
